

GOOGLE FUSION TABLES

Tomasz Przechlewski

GFT: Google Fusion Tables

GFT is a service that [in theory] allows you to impress f&f without the need to spend too much time to learn the principles of spatial data visualization.

Limits: 1 GB / user; 350,000 map features, maybe some other...

The data is stored in tables (as in a spreadsheet). The table may contain 4 types of data: NUMBER, STRING, LOCATION, DATETIME.

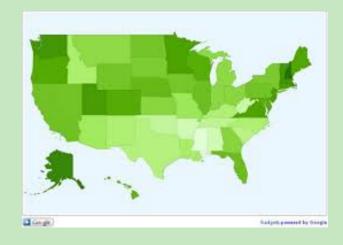

Values in the LOCATION column can be strings with an address or pair latitude/longitude or KML document fragment specifying a point, line, or polygon.

LOCATION columns allows data presentation on Google map.

Tables can be merged (MERGE)

Intensity map vel choropleth

API https://developers.google.com/fusiontables/
